SUMMARY

A **Data Analyst** with high technical expertise and skills in data analysis within machine learning and artificial intelligence. Passionate and interested in Deep Learning technologies, and hard working on using these technologies to improve the user experience in various sectors. Interest and focus on developing smart cities and industrial automation. Always passionate about research, guiding and teaching students, and helping others.

Education

- **BSc in Information Systems,** King Khalid University, Abha, SA *2019-2023*

  Ranked by the Times Higher Education the 6th rank locally and 501th rank globally, and 2nd locally in scientific research.

  - *Specialization: Data Science*
  - *GPA: 4.61/5*
  - *Second Class Honor.*
  - *Classes Leader for Information Systems Department*

Experience and INTERNSHIPS

- **Google Student Development Club (Training supervisor).** *2023-2024*
  - Trainer for courses on Python and Data Analysis, impacting over 100 participants with 8.6/10 average rating.
  - Leader of the Game Development Camp at King Khalid University.
  - Best Trainer of the Year 2023.

- **Deanship of E-Learning (Summer Training).** *Jul-Aug 2023*
  - Refine trainees' skills in five tracks (artificial intelligence, data analysis, application design, website design, and entrepreneurship) with a final project for each track.
  - Create first mini Chatbot.
  - 3rd place in graduation projects via Researcher App.

- **Saudi Telecom Company (Cooperative Training).** *Jun-Aug 2022*
  - Working on project to distinguish customers' emotions based on their voices to improve their service process.
  - Full score evaluation among trainees.
  - Best presentation of training contents.

Applied Skills

- AI, DL, ML Systems Development.
- Programming with Python, R and Java.
- Data analyst and mining.
- Data visualization using BI tools.
- Front End Developer.
- Technical Troubleshooting and Debugging.

Soft Skills

- Team Leadership.
- Creative Thinking.
- Time Management.
- Responsibility.
- Communication.
- Problem Solving

Projects and Contributions

- **Rights protection system using biometric features** (Graduation Project)
  - An intermediary system between hospitals and insurance companies that contains updated technologies such as facial recognition and fingerprint identification to prevent identity theft and keep records from tampering.
  - Rights protection system using biometric features Research paper, Ongoing.

- **Researcher APP Programmer and Leader** (Teamwork)
  - Creating an application that brings together researchers, journals, and readers in one place so that it facilitates the process of reading research and encourages more interested people. It also includes proposing algorithms that study users' interests and present to them the research and researchers closest to them according to their interests.
  - 4th place in the CodLab Hackathon for 2023.

- **SLSR smart tools library** (Education Using AI Hackathon)
  - Create a tool trained to deal with natural language so that it takes files as input, reads them, processes them, and extracts questions from them to help the student study.
  - 5th place in the Hackathon for 2022-2023.

- **Academic Advising System** (BI project)
  - Research was conducted and the current academic advising system at KKU was studied, and then a modification plan was proposed, and a technical system was created to serve students.
  - 1st place in university projects for 2022-2023.

- **Lahga** (Teamwork)
  - A program that serves the differences in dialects in the Kingdom of Saudi Arabia, as it allows you to enter any strange word from different dialects in the regions of the Kingdom and gives you the meaning of the word in the classical dialect.

- **Virtual Reality Coming to Xbox** (Teamwork)
  - A project that contains the complete work plan to create virtual reality glasses for the Xbox provided by Microsoft, so that it avoids the errors found in usual devices and is designed with technologies that serve players more effectively.
  - The device is designed to provide eye comfort for gamers who wear glasses.
  - Artificial intelligence has been supported by the design so that it recognizes the entire area of the room, which allows playing in a wider range using only Bluetooth, without any wires.

Professional Certifications

- Google Professional Certificate in Business Intelligence.
- Microsoft Professional Certificate in Data Science and Analysis.
- IBM Professional Certificate in AI Foundations (Python).
- UOM Certificate in Data Science for Health Research Specialization.
- MathWorks Certificate in Computer Vision for Engineering and Science Specialization.
